Questionnaire 2
Version 1

Insight:
This version of the questionnaire was designed to gather information on what kind of system we should be designing. The results of this questionnaire ended up helping us define the requirements better and re-adjust our concepts accordingly. In essence, we picked one of the alternatives after this.

Introduction: We're working on a project which focuses on finding the challenging time/panic management within the university environment. The project outcome is to develop a panic management application which will be focused on helping students, professors along with other people who are suffering from time-management. We will ask you questions to help us shape the scope of the application.

Your experience on panic management:
1. You find it easy to deal with unanticipated events? Yes/No
2. It is difficult to forget to write a reminder manually in reminder applications? Yes/No
3. The existing user experience of time management/ reminder applications is sufficient for you? Yes/No
4. Effective and efficient applications has to detect your situation and based on the situation you are in they send you messages or notifications? Yes/No
5. Applications that give you notification in times in which you're busy doing other activity are effective and efficient applications?Yes/No
6. Writing manually the events you will have on reminder/time management applications is not time consuming? Yes/No
7. When facing a event that you did not plan for or anticipate, reminder/time management or other sorts of applications you use will still help you overcome the event successfully? Yes/No
8. What goes through your head last time you failed to meet a deadline or forgot to do a certain activity that you wanted to do?
9. How comfortable do you think you are with existing reminder/time management applications?
   a.   Very Comfortable
   b.   Neutral
   c.   Unsatisfied
10. What sort of situations would you need a panic management application?
